

365id Document Holder

The 365id Scanner is designed to scan passports, ID cards and driving licenses.

However, some documents are not compatible with these slots because of their material or size. The 365id Document Holder eliminates this issue through working as an adapter for these documents.

Instructions

1. Carefully bend the black plastic piece up to 20mm
2. Insert the ID document, aligning it to the bottom left.
3. Once the document is correctly in place, insert the 365id Document Holder into the 365id Scanner's passport slot.
4. The scanning procedure will now proceed according to your 365id Scanner Manual.

Please note

1. Most of the document you scan with 365id Document Holder will most likely give “yellow” result. However, some mid-size document can give “green” or “red” result.
2. If you have chosen storage of scanned documents, copies will be stored and you can extract them when needed.
