1. Before you start

The 365id Integrations – Wheelsys (API) is designed for Wheelsys web-based car rental system. The 365id Integration – Wheelsys (API) transfers the textual information and picture from scanned ID document into the applicable fields in Wheelsys.

Requirements

365id Scanner with Wheelsys subscription

1. Installation

Integrating your 365id Scanner to Wheels is designed to be quick and easy.

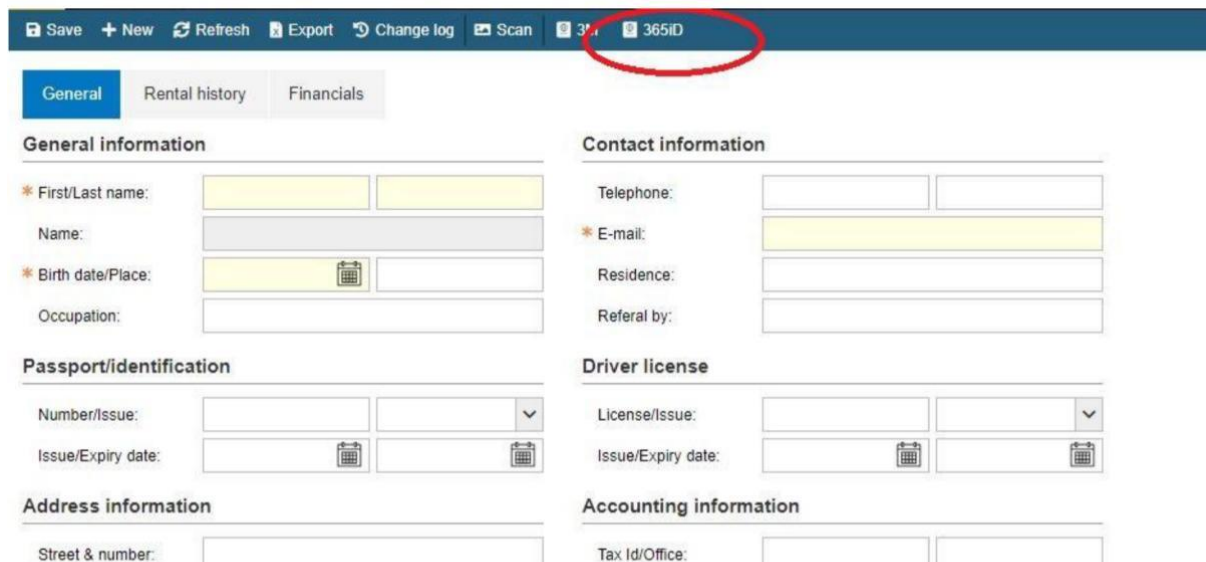

- a) Connected your 365id Scanner with internet and power.
- b) Login to Wheels, make sure you have administrator rights and navigate to *Company > Printing and Communications > Manage 365id Device*
- c) Add a description e.g. Front desk 1
- d) Enter the serial number located on the bottom of your 365id Scanner.
The serial number must not contain any spaces between the numbers
- e) Select the station.
- f) Save the settings and your 365id Scanner are ready to be used with Wheelsys.

2. Testing

You can test the integration if you want

- a) In Wheelsys chose Customers > New > Individual Renter
- b) Scan an ID document in your 365id Scanner
- c) A few of seconds later the "365id" button is flashing (see image below)
- d) Click on the "365id" button and chose the person you scanned from the list
- e) The customer data will automatically be populated into Wheelsys.

NOTE – For the information to be filled in, you need to have the rental agreement open.

The screenshot shows the top navigation bar of the Wheelsys software. The '365ID' button is highlighted with a red circle. Below the navigation bar, there are three tabs: 'General', 'Rental history', and 'Financials'. The 'General' tab is active, displaying various form fields for customer information, including 'General information', 'Passport/identification', 'Address information', 'Contact information', 'Driver license', and 'Accounting information'. The '365ID' button is located in the top right corner of the navigation bar.
